Sr. Software Quality Assurance Engineer

Skills and Qualifications:
7-10 Years in Software Development
A Bachelor's degree with 7-10 years of quality assurance/engineering experience. Ability to create test plans and execute from backend data quality to front-end data integrity verification.

Expertise in:
- SQL Server / T-SQL
- Postman, API testing
- Test Automation Tools (Sahi, Selenium)
- Scripting languages (PowerShell, csh)
- Programming languages (C#, PowerShell, Python)

Essential Duties and Responsibilities:
- Execute functional and regression tests against new system features and enhancements
- Create and execute manual and automated regression test scripts
- Review product specifications and work across groups to develop appropriate test strategies and detailed test plans
- Assess impact of bugs and issues
- Frontline troubleshooting of CS reported issues
- Research root cause
- Communicate and facilitate QA issues across engineering, product, and program management teams
- Assist in sprint planning and project estimations
- Signoff of project/product releases

Required Skills
- 7 to 10 years of experience in software QA
- Good communication skills
- Hands on experience in back end testing. Should have very good knowledge of SQL and relational databases
- Experience in developing test functions using automated load/stress and performance testing and tools such as Selenium or Sahi
- Experience with API testing using Postman
- Experience with data quality and data integrity verification
- Experience in setting up validation frameworks
- Should be able to lead a project

Personal Characteristics
- Passionate about quality
- Committed to customer satisfaction and quality of services
- Strong problem-solving and analytical skills to dig in and research root cause
- Takes initiative, driven, self-starter, requires very little supervision
- Passion for learning, continuous improvement, sharing and working in a team environment
- Unafraid to challenge assumptions and humble enough to recognize a mistaken position
- Learn quickly and apply new knowledge, demonstrating desire to keep up with emerging technologies
- Real estate experience or familiarity with homebuying process is a big plus
